

PROBLEM

- Every fourth Pakistani is diabetic or pre-diabetic, and the global burden of diabetes continues to grow at a rapid pace.
- The management of diabetes stands to benefit from mHealth, as it is largely dependent on smart data management and timely actions by patients. But this is a big mental burden.
- Consequently, most people with diabetes aggravate their condition.
- With the Medworks application, we are streamlining the management, sharing, and archiving of this data.
- We are also working to expand the range of devices connected to our platform to expand the data points available, and streamline sharing of health parameters with healthcare providers

PROPOSED BENEFITS OF PRODUCT

WHO WE ARE?

—
A bit about the company

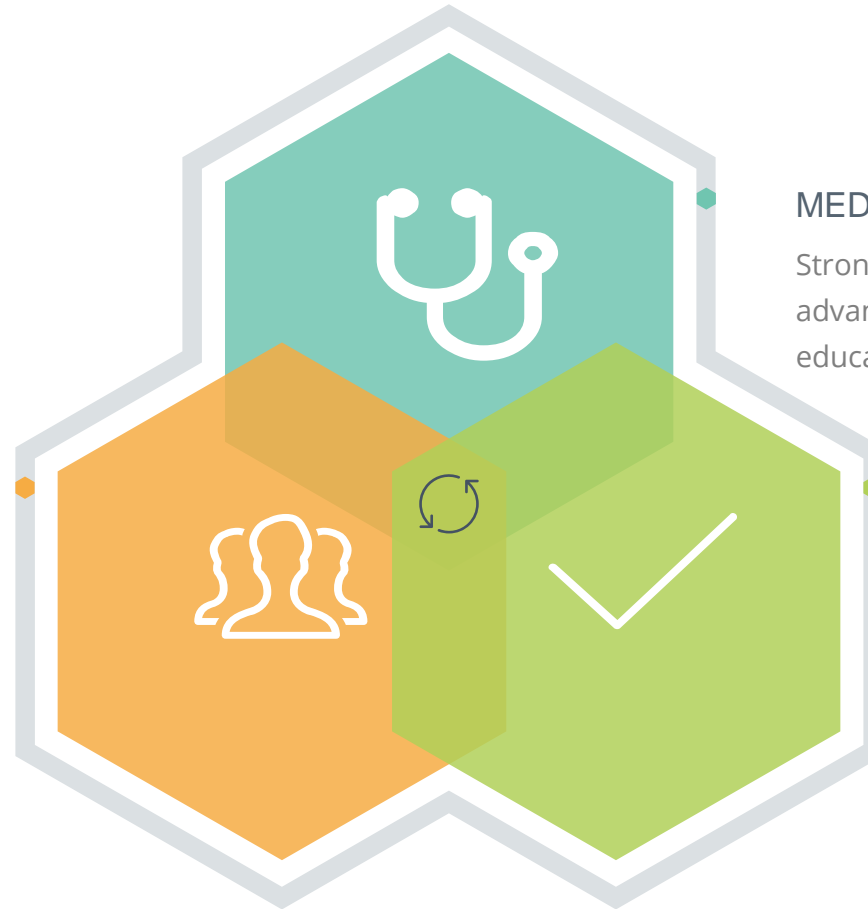

COMPANY TIMELINE

HIGHLIGHTS

RELATIONSHIPS
Strong relationships with
healthcare institutions

MEDICAL RESEARCH
Strong commitment to the
advancement of medical
education and research

LEGACY
Parent company has strong
legacy in Pakistan's health
landscape

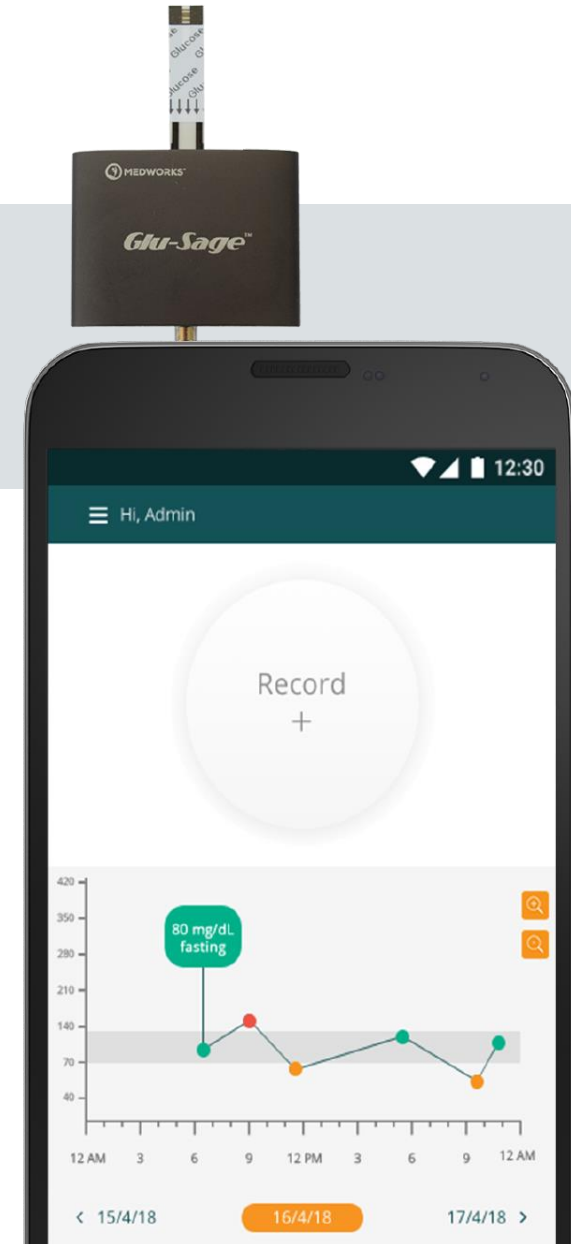

WHAT WE DO?

Our present product

SHOWCASE

Medworks Mobile App

Data management app
Auto-populates logbooks

Compact Glucose Meter
Easily fits into a pocket or purse

Data Sharing
Share reports at the push of a button

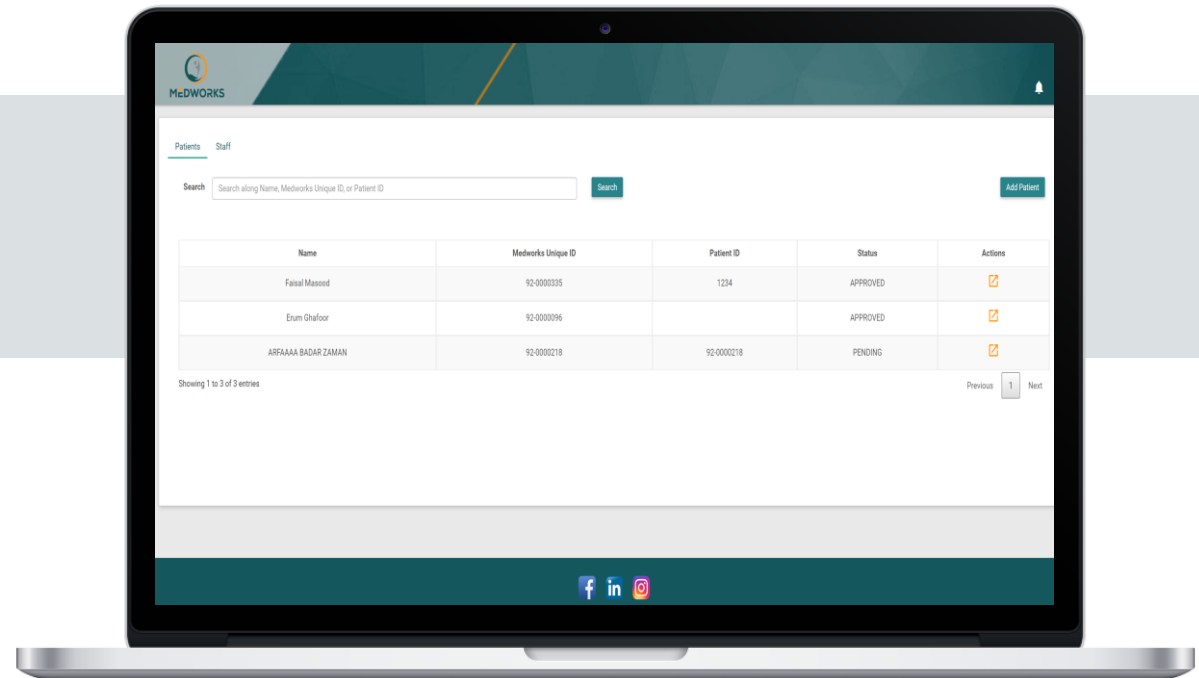

Snapshot Report
Summarizes data for quick decision making

SHOWCASE

Medworks Web App

A platform whereby institutions can send data share requests to patients. Upon patients' approval using their smartphones, the institution staff has access to patient data remotely. This is also invaluable for institutions like pharma and insurance companies.
